

Backflow Testing,

Yes, the team at Summers Irrigation Inc are trained and licensed to install, test, and provide documented backflow certification of all types of back-flow prevention devices. We will manage all aspects of the testing for you. our technician will complete the inspection paperwork and submit it directly to your appropriate water authority. In the event your unit fails the testing, Our technician will outline your options to repair or replace the unit so that it complies with the local requirements.

NOTE: Before you hire a company to test your back-flow devices, be sure they are trained to test AND REPAIR the backflow units. Not all companies are trained to test & repair backflow devices!! You can rest assured that the technicians from Plumbing Professors can test & repair your backflow device.

Why Backflow Testing?

Municipal and State plumbing codes typically require the installation of backflow prevention devices in most commercial building, and some residential homes whenever there is a chance that a “back flow” of water could be sucked into the clean water system. The size and complexity of the installed backflow preventor will coincide with the specific back-flow risks that each situation presents. Bottom line, backflow preventors are the key to protecting the clean water supply, most need to be tested annually.

What is Backflow?

It's simplest form a “backflow” occurs when clean (potable) water reverses direction causing a suction that pulls dirty water into the clean supply system. Needless to say the “dirty” water can contain any number of harmful chemicals, fertilizers and even human waste...yuck! Anytime there is a cross-connection between clean (potable) water and “dirty” (non-potable) water the chance of a back-flow exists. Consequently, backflow preventers are normally required at any cross-connections in residential, commercial or industrial water systems.

What is a Backflow Prevention Device?

Ranging from simple to extremely complex, these units are a series of check valves that prevent water from flowing “backwards” into the clean water supply during times of unequal water pressure or other unique pressure conditions or fluctuations. When installed and maintained correctly, a backflow preventor keeps the clean water supply safe.

Backflow Testing, also called Back Flow Testing or Backflow certification

Most backflow systems must be inspected annually to verify their proper operation, back-flow testing is normally considered mandatory with nasty enforcement actions possible against owners who do not complete the system testing promptly. The experts at Plumbing Professors will take care of your backflow testing so you don't have to worry about it simply **call Summers Irrigation Inc @ 248-683-2127**

Summers Irrigation Inc, Technicians Are Professionals,

We are fully licensed and insured for all of your needs. Our technicians are clean-cut, polite, friendly, arrive on-time and are background and drug tested for your peace of mind For all our work you are assured of option pricing you will know the repair options we suggest and the price of each option BEFORE we do any work. You pick and approve the option you like best, only then do we do the work.
